                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   អន្តមាន នេះ
The present invention describes an immunomodulatory polynucleotide (I) comprising an immunostimulatory sequence (ISS). Also described: (1) an CC immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (INP/MC) complex, comprising (I) linked to a biodegradable MC, where the MC is less than 10 micrometre in size; and CC did a kit comprising (I). (I) has antiallergic, antiasthmatic, virucide, antibacterial and protozoacide activities, and can be used as a modulator of immune response. (I) is useful for modulating an immune response in an CC individual suffering from disorders associated with a Th2-type immune cresponse, especially an allergy associated with a Th2-type immune cresponse, especially an allergy associated with a Th2-type immune cresponse, especially an allergy interferon-gamma (IFN-gamma) in an CC individual having idiopathic pulmonary fibrosis, or IFN-gamma) in an CC individual having a viral infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmaniasis, cc toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ន្តន្តន្តន្ត្
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                            The invention relates to a novel chimeric immunomodulatory compound (CIC) having immunomodulatory activity, comprising two or more nucleic acid moieties and one or more non-nucleic acid spacer moiety is covalently joined to two nucleic acid moieties, where at least one non-nucleic acid spacer moiety is covalently joined to two nucleic acid moieties, where the spacer is not a polypeptide, and at least one nucleic acid moiety comprises the sequence 5'-CG-3'. The chimeric could moiety compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEG) subunits. CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is an allergy or allergy-induced asthma, and an infectious disease. CIC is a number of the individual has idiopathic pulmonary is a second or a viral infection. CIC's are useful for ameliorating a complete or a viral infection. CIC's are useful for ameliorating as a second or a viral infection. CIC's are useful for ameliorating as a complete or a viral infection. CIC's are useful for ameliorating as a complete or a viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

This polynucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compound of the invention.
The present invention describes an immunomodulatory polynucleotide (I) comprising an immunostimulatory sequence (IS). Also described: (I) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (IMP/MC) complex, comprising (I) linked to a biodegradable MC, where the MC is less than 10 micrometre in size; and (3) a kit comprising (I). (I) has antiallergic, antiasthmatic, virucide, antibacterial and protozoacide activities, and can be used as a modulator of immune response. (I) is useful for modulating an immune response in an individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease. (I) is useful for modulator or an infectious disease.
                                                                                                                                                                                                                                              Immunomodulatory polynucleotide for modulating an immune response subject suffering from disorders associated with Th2-type immune response, e.g. allergy, or infectious disease, comprises an

having immunomodulatory activity, comprising two or more nucleic acid moleties and one or more nucleic acid spacer moleties acid spacer moleties, where at least one non-nucleic acid spacer molety is covalently joined to two nucleic acid moleties, where the spacer is not a polypeptide, and at least one nucleic acid molety comprises the sequence 5.-CG-3. The chimeric immunodulatory compounds more specifically contain the nucleic acid spacer moleties of linear hexaethylene glycol structure (HEG) subunits. CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type immune response which is an allergy or allergy-induced asthma, and an infectious disease. CIC is also useful for increasing IFN-gamma;, or IFN-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      individual having idiopathic pulmonary fibrosis, or IFN-alpha in an individual having a viral infection. (I) is further useful for ameliorating a symptom of an infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmaniasis, toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or symptom of an immunoglobulin E (IgE)-related disorder, preferably an allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel chimeric immunomodulatory compound having immunomodulatory activity, useful for modulating an immune response and for treating cancer, has nucleic acid moieties and non-nucleic acid spacer moieties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chimeric immunomodulatory compound; CIC; immunomodulatory activity; spacer moiety; linear hexaethylene glycol structure; HEG; immune; Th2-type; allergy; allergy-induced asthma; infectious disease; IFN-gamma; IFN-alpha; idiopathic pulmonary fibrosis; viral infection; ameliorating; immunoglobulin E; IgE; allergy; cancer;

The present invention describes an immunomodulatory polynucleotide (I) comprising an immunostimulatory sequence (ISS). Also described: (I) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (INP/MC) complex, comprising (I) linked to a biodegradable MC, where the MC is less than 10 micrometre in size; and (3) a kit comprising (I). (I) has antiallergic, antisthmatic, virucide, antibacterial and protozoacide activities, and can be used as a modulator of immune response. (I) is useful for modulating an immune response in an individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease. (I) is also useful for increasing interferon-gamma (IFN-gamma) in an individual having idiopathic pulmonary fibrosis, or IFN-alpha in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      alpha; in an individual, where the individual has idiopathic pulmonary fibrosis, or a viral infection. CIC's are useful for ameliorating a symptom of an infectious disease, or an immunoglobulin E (IgE) related disorder in an individual, where the IgE-related disorder is allergy, or an allergy-related disorder. CIC's are also useful for treating cancer and can be used for stimulating cellular immune system cells production in an individual. This polymucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunomodulatory polynucleotide for modulating an immune r subject suffering from disorders associated with Th2-type response, e.g. allergy, or infectious disease, comprises a immunostimulatory sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      allergy; asthma; infectious disease; interferon-gamma; IFN-gamma; disease; idiopathic pulmonary fibrosis; viral infection; mycobacterial disease; malaria; leishmaniasis; coxoplasmosis; schistosomiasis; clonorchiasis; immunoglobulin E; IgE-related disorder; antiallergic; antiasthmatic;

comprising an immunostimulatory sequence (ISS). Also described: (1) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (IMP/MC) complex, comprising (I) linked to a biodegradable MC, where the MC is less than 10 micrometre in size; and (3) a kit comprising (I). (I) has antiallergic, antiasthmatic, virucide, antibacterial and protozoacide activities, and can be used as a modulator of immune response. (I) is useful for modulating an immune response in an individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease. (I) is also useful for increasing interferon-gamma (IFN-gamma) in an individual having idiopathic pulmonary fibrosis, or IFN-alpha in an individual having a viral infection. (I) is further useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       individual having a viral infection. (I) is further useful for ameliorating a symptom of an infectious disease caused by a cellular ameliorating a symptom of an infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmanlasis, toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or a symptom of an immunoglobulin E (IgE)-related disorder, preferably an allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABQ75222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 19

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ព្រះព្រះព្រះជន្
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
The invention relates to a novel chimeric immunomodulatory compound (CIC) Chaving immunomodulatory activity, comprising two or more nucleic acid moieties and one or more non-nucleic acid spacer moieties, where at least one non-nucleic acid spacer moiety is covalently joined to two nucleic acid moieties, where the spacer is not a polypeptide, and at least one nucleic acid moiety comprises the sequence 5'-CG-3'. The chimeric compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEG) subunits. CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type infectious disease. CIC is also useful for increasing IFN-gamma, or IFN-cipha; in an individual, where the individual has idiopathic pulmonary compounds infections or a viral infection. CIC's are useful for ameliorating a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                          having immunomodulatory activity, comprising two or more nucleic acid moleties and one or more non-nucleic acid spacer moieties, where at least one non-nucleic acid spacer moiety is covalently joined to two nucleic acid moleties, where the spacer is not a polypeptide, and at least one nucleic acid moiety comprises the sequence 5'-CG-3'. The chimeric immunodulatory compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEO) subunits. CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type immune response which is an allergy or allergy-induced asthma, and an infectious disease. CIC is also useful for increasing IFN-gamma; or IFN-alpha; in an individual, where the individual has idiopathic pulmonary is the property of the property 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chimeric immunomodulatory compound; CIC; immunomodulatory activity; spacer moiety; linear hexaethylene glycol structure; HEG; immune; Th2-type; allergy-induced asthma; infectious disease; IFN-gamma IFN-alpha; idiopathic pulmonary fibrosis; viral infection; ameliorating; immunoglobulin E; IgE; allergy; cancer; stimulating cellular immune system cell; ss.

The present comprising a

polynucleotide/microcarrier

comprising an immunostimulatory sequence (ISS). Also described: (1) immunomodulatory composition comprising (I); (2) an immunomodulatory

invention describes an immunomodulatory polynucleotide (I)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                symptom of an infectious disease, or an immunoglobulin E (IgE)-related disorder in an individual, where the IgE-related disorder is allergy, of an allergy-related disorder. CIC's are allergy-related disorder. CIC's are allo useful for treating cancer and can be used for stimulating cellular immune system cells production in an individual. This polynucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compounds the sequence which is a nucleic acid moiety part of a chimeric immunodulatory compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABQ75174 standard; DNA; 19 BP

(1) has antiallergic, antiasthmatic, virucide, CC antibacterial and protozoacide activities, and can be used as a modulator of immune response. (1) is useful for modulating an immune response in an individual suffering from disorders associated with a Th2-type immune CC response, especially an allergy or asthma, or an infectious disease. (1) is also useful for increasing interferon-gamma (IFV-gamma) in an CC individual having idiopathic pulmonary fibrosis, or IFV-alpha in an CC individual having a viral infection. (1) is further useful for CC ameliorating a symptom of an infectious disease caused by a cellular CC pathogen such as mycobacterial disease, malaria, leishmaniasis, or a complete of an immunoglobulin E (1gB)-related disorder, preferably an CC allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from the

Best Local :
The invention relates to a novel chimeric immunomodulatory compound (CIC) having immunomodulatory activity, comprising two or more nucleic acid moieties and one or more non-nucleic acid spacer moieties, where at least one non-nucleic acid spacer moiety is covalently joined to two nucleic acid moieties, where the spacer is not a polypeptide, and at least one
                                                                                                                                                                                                                                                                                                   Novel chimeric immunomodulatory compound having immunomodulatory activity, useful for modulating an immune response and for treat cancer, has nucleic acid moieties and non-nucleic acid spacer mo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chimeric immunomodulatory compound; CIC; immunomodulatory activity; spacer moiety; linear hexaethylene glycol structure; HEG; immune; Th2-type; allergy-induced asthma; infectious disease; IFN-gamma; IFN-alpha; idiopathic pulmonary fibrosis; viral infection; ameliorating; immunocless; Transparents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19

cc immunodulatory comprises the sequence 5'-CG-3'. The chimeric cc immunodulatory compounds more specifically contain the nucleic acid cc spacer modeties of linear hexaethylene glycol structure (HEG) subunits. CC CIC's are useful for modulating an immune response in an individual, cc immune response which is an allergy or allergy-induced asthma, and an CC infectious disease. CIC is also useful for increasing IFN-gamma;, or IFN-CC alpha; in an individual, where the individual has idiopathic pulmonary CC fibrosis, or a viral infection. CIC's are useful for ameliorating a CC symptom of an infectious disease, or an immunoglobulin E (IgE)-related CC disorder in an individual, where the IgE-related disorder is allergy, or an allergy-related disorder. CIC's are also useful for treating cancer CC and can be used for stimulating cellular immune system cells production in an individual. This polynucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compound of the invention.

The present invention describes an immunomodulatory polynuclectide (comprising an immunostimulatory sequence (ISS). Also described: (1) immunomodulatory composition comprising (I); (2) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynuclectide/microcarrier (INF)MC) complex, comprising (I) linked biodegradable MC, where the MC is less than 10 micrometre in size; and biodegradable MC, where the MC is less than 10 micrometre in size; and biodegradable MC, where the MC is less than 10 micrometre in size; and biodegradable MC.

an

Example

(3) a kit comprising (I). (I) has antiallergic, antiasthmat antibacterial and protozoacide activities, and can be used of immune response. (I) is useful for modulating an immune

antiasthmatic, virucide,

modulator

(I) is useful for modulating an immune response in a individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease. (I) is also useful for increasing interferon-gamma (IFN-gamma) in an individual having idiopathic pulmonary fibrosis, or IFN-alpha in an individual having a viral infection. (I) is further useful for ameliorating a symptom of an infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmaniasis, toxoplasmosis, schiscosomiasis and clonorchiasis in an individual, or a symptom of an immunoglobulin E (IgE) related disorder, preferably an allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from the

cc immunodulatory compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEG) subunits. CC CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type immune response which is an allergy or allergy-induced asthma, and an CC infectious disease. CIC is also useful for increasing IFN-gamma; or IFN-calpha; in an individual, where the individual has idiopathic pulmonary CC fibrosis, or a viral infectious CIC's are useful for ameliorating a CC symptom of an infectious disease, or an immunoglobulin E (IgE) related disorder in an individual, where the IgE-related disorder is allergy, or CC and can be used for stimulating cellular immune system cells production CC in an individual. This polynucleotide sequence represents a DNA sequence of the invention acid moiety part of a chimeric immunodulatory compound
                                                           of the invention.

contain Immunostimulatory oligonucleotides regulate the immune contain an immune-stimulating octanucleotide sequence; allergic and infectious diseases. system - and for treating

Page 29; 63pp; English

The invention relates to immunomodulatory oligonucleotides that comprise at least 1 immunostimulatory octanucleotide sequence (ISS) where the ISS sequences are selected from the group consisting of AACGTTCC, AACGTTCG, GACGTTCC. The immunomodulatory sequences are used to treat patients needing immune regulation, such as those suffering from cancer, an allergic disease and asthma. They are also used to prevent infectious diseases such as influenza, herpes, hepatitis B, human immunodeficiency and papillomavirus, Hemophilus influenza, Mycobacterium tuberculosis and Bordetella pertussis, malarial plasmodia, Leishmania, Trypanosoma and

having immunomodulatory activity, comprising two or more nucleic aci moieties and one or more non-nucleic acid spacer moieties, where at one non-nucleic acid spacer moiety is covalently joined to two nucle acid moieties, where the spacer is not a polypeptide, and at least c nucleic acid moiety comprises the sequence 5'-CG-3'. The chimeric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schistosoma. The immunomodulatory sequences are used to screen for humatimunoftimulatory activity by incubating macrophage cells and the oligonucleotide; and determining the relative amount of Thi-biased cytokines in the supernatant. Sequences AAV80096 to AAV80103 represent specific claimed examples of such immunomodulatory oligonucleotides
                                                                                                                                                      immunomodulatory polynucleotide comprising an immunostimulatory sequence (ISS). This sequence represents an ISS that can be used in the composition. An immunostimulatory composition which comprises a gp120 conjugated to an immunomodulatory polynucleotide, or is proximately associated to it and not conjugated, is used for modulating or stimulating a specific immune response against gp120 an an individual by producing anti-gp120 antibodies or gp120 specific cycotoxic T cells. It is also used for suppressing or delaying development of HIV infection in an individual infected with HIV or an individual at risk of infection with HIV, respectively. It is also used for treating an individual infected with HIV or an individual an individual infected with HIV or an individual an individual infected with HIV or an individual an individual infected with HIV in need of immune modulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      development;

                                                                                                                                                                                                                                                                                                                             microcarrier complexes. The complexes comprise an immunostimulatory sequence (ISS), e.g. the present sequence, linked to a nonbiodegradable microcarrier provided that if the microcarrier is gold, latex or magnetic then the linkage is not biotin/avidin. The complex is useful for modulating an immune response (especially stimulating a Thi-type response or suppressing a Thi-type response), increasing interferon-gamma (especially in a patient suffering from idiopathic pulmonary fibrosis),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (I) and (II) have immunomodulatory, immunosuppressive and antiallergic activities, and can be used in the modulation of immune responses via the stimulation of Th1 lymphocytes and Th1-associated cytokines, and suppression of Th2 lymphocytes and cytokines. The populations (I) and (II) of conjugate molecules may be used for modulating immune responses in individuals e.g. for the treatment of an allergic condition. (I) and (II) may be used to modulate immune responses and therefore prevent potentially harmful reactions to antigens. The present sequence represents an ISS polynucleotide which is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                     Immunostimulatory sequence; ISS; ds; antiviral; immunogen; respiratory syncytial virus; RSV; influenza virus; rhinovirus; adenovirus; measles virus; mumps virus; parainfluenza virus; rubella virus; poxvirus; parvovirus; hantavirus; varicella virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the immunological properties (e.g. the extent of antigen-specific antibody formation, including Thi-associated antibody formation) so the conjugates are used for altering the type and extent of immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Populations of conjugate molecules comprising polynucleotide immunostimulatory sequences polynucleotides and antigens, useful for controlling immune responses.

The invention is used to prevent and treat respiratory syncytial virus influenza virus, rhinovirus, adenovirus, measles virus, mumps virus, parainfluenza virus, rubella virus, poxvirus, parvovirus, hantavirus and varicella virus, A kit for carrying out the administration is also included. Unlike the prior art antiviral agent ribavirin, which is a potential teratogen, the invention provides a treatment which does not carry unacceptable side effects. Other prior art medicaments treat the symptoms only, whilst the invention treats the infection. The present sequence is an ISS of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to suppressing a respiratory syncytial virus (RSV) infection in an exposed individual, comprising administering a

microcarrier (IMP/MC) having an immurcar

esent invention describes an immunomodulatory polynucleotide/arrier (IMP/MC) complex (I), which comprises a polynucleotide an immunostimulatory sequence (ISS) linked to a biodegradable

nich comprises a polynucleotide (ISS) linked to a biodegradable

biodegradable

The present invention describes a method for reducing severity of a symptom of virus infection in an individual infected with a virus. The method comprises administering a composition consisting of a polynucleotide having an immunostimulatory sequence (ISS). The ISS comprises the sequence 5'-C,G,pyrimidine,pyrimidine,C,G-3'. An antigen administered in conjunction with the composition. ISS has viruoide activity and can be used in gene therapy. The method using the ISS can

cc is less than 10 micro m in size. (I) has immunomodulator, antiallergic, cc antibacterial, antiprotozoal, antiparasitic, hepatotropic and antiparterial activities. It can be used as an interferon (IFN)-alpha cc nephrotropic activities. It can be used as an interferon (IFN)-alpha cc stimulator, IFN-gamma stimulator or an immunoglobulin E (IgE) stimulator. (I) can be used for modulating the immune response of individuals, cc particularly humans. The IMP/MC complex is particularly useful for treating idiopathic pulmonary fibrosis (IPF), scleroderma, cutaneous treating idiopathic pulmonary fibrosis including schistosomiasis cradiation-induced fibrosis, hepatic fibrosis including schistosomiasis. Cc radiation-induced fibrosis, renal fibrosis, infectious diseases caused by cc induced hepatic fibrosis, renal fibrosis, infectious diseases caused by cc cellular pathogen (e.g. a mycobacterial disease, malaria, leishmaniasis, complasmosis, schistosomiasis or chlonorchiasis), or disorders complasmosis, schistosomiasis or chlonorchiasis), or disorders consecutation and the complasmosis or prophylactic vaccines, in individuals receiving therapeutic or prophylactic vaccines, in individuals receiving cancer, or in individuals at risk of exposure to an infectious agent. The cancer are received as the complex of the comp

                                              The present invention relates to novel methods of treating, preventing, or reducing the severity or recurrence of a symptom of herpes simplex virus (HSV) infection in an individual who has been exposed to or who is infected with HSV. The method comprises administering a polynucleotide having an immune response. A composition containing ISS is administered without a HSV (alphaherpesvirinae) antigen. The composition can be included in a kit for ameliorating or preventing a symptom of HSV infection caused by herpes virus or preventing a symptom of HSV particularly HSV-2. Such HSV infections include chicken pox, herpes one of the ISS polynucleotides of the invention. Note: The present sequence is shown as single stranded in the specification, but the present sequence state on page 20 that this sequence may be double stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            used for suppressing, ameliorating and/or preventing viral infections to an individual who may be at risk of being exposed to, exposed to or infected by a virus. It may also be used in reducing the recurrence or duration of a symptom of viral infection, delaying the development of a virus infection, and reducing viraemia or blood levels of virus antigens. The present sequence represents an ISS given in the exemplification of

                                                                                                                                                                                                                                      The present invention relates to novel methods of treating, preventing, or reducing the severity or recurrence of a symptom of papillomavirus infection in an individual that has been exposed to or who is infected with papillomavirus. The method comprises administering a polynucleotide having an immune response. A composition containing ISS is administer induces an immune response. A composition containing ISS is administered without a papillomavirus antigen. The composition can be included in a without a papillomavirus antigen. The composition can
                                                                                                                                            kit for ameliorating or preventing a symptom of human or animal papillomavirus infection. Infections with human papillomavirus (HPV) which can be prevented or treated using the method of the invention include sexually transmitted diseases (STDs), warts, papillomas and cervical cancer. The present sequence represents one of the ISS polynucleotides of the invention. Note: The present sequence is show polynucleotides of the invention. Note: The present sequence is show the present sequence is show polynucleotides of the invention.

                                                                                                                                                                                                                                                                     The present invention describes a method for reducing viraemia or blood levels of a hepatitis virus antigen in an individual infected with hepatitis B virus (HBV). The method comprises administering a composition comprising a polynucleotide having an immunostimulatory sequence (ISS) to the individual, where the ISS comprises the sequence 5'-C, G-3', an HBV antigen is not administered in conjunction with administration of the composition, and where the composition is administered in an amount sufficient to reduce HBV viraemia or blood levels of a hepatitis virus antigen. ISS has virucide, anti-inflammatory and hepatotropic activities, and can be used in gene therapy. The method can be used for suppressing and/or ameliorating hepatitis infection in an individual, especially for preventing, palliating, ameliorating, reducing and/or eliminating one or more symptoms of HBV or HCV (hepatitis C virus) infection without administering wiraemia and hepatitis viral antigen in blood. ISS-containing reducing viraemia and hepatitis viral antigen in blood. ISS-containing

                                                                                                                                                                                                                                                                                                                                          capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                           á
                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid CC encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC proliferation or the activity of a gene in an operon required for CC conjudent for proliferation, or that his influences the activity of the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) CC identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene CC product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the gene compound that inhibits the gene compound that inhibits the gene compound that inhibits the compound tha

                                                                                                                       CC This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on CC the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central CC enrous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for cravestigating cell differentiation of cell or tissue types and for Status of many C residues to be determined simultaneously. ABQ13410-CC ABQ54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert CC genomic Sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, CC of oligonuclectides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridisation to both classes is determined from the label on CC the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used: CC and of a wide range of diseases, e.g. cancer, disorders of the central CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation. The method allows the methylation convestigating cell differentiation. The method allows the methylation convestigating cell differentiation. The method allows the methylation of for tatus of many C residues to be determined simultaneously. ABQ13410-CC ABQ34121 represent genomic DNA sequences used to illustrate the method in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the eincoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The nucleic acids are single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faccium infections. The present sequence represent

Since tubulin function is essential for cell division and proliferation, agents which interfere with tubulin function can serve as useful antiproliferative compounds. Such interfering agents have potential utility as agents for the treatment of hyperproliferative diseases such as cancer and the treatment of gout
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated cofactor(s) for tubulin folding - a identifying agents which interfere with folding -proliferative diseases such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1998-130618/12

Chaving immunomodulatory activity, comprising two or more nucleic acid cone non-nucleic acid spacer moieties, where at least cone non-nucleic acid spacer moieties, where at least cone non-nucleic acid spacer moieties, where at least cone nucleic acid moieties, where the spacer is not a polypeptide, and at least one concludatory compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (REG) subunits. CC CIC's are useful for modulating an immune response in an individual, contain the individual suffers from a disorder associated with a Th2-type immune response which is an allergy or allergy-induced asthma, and an infectious disease. CIC is also useful for increasing IFN-gamma; or IFN-calpha; in an individual, where the individual has idiopathic pulmonary compound of an infectious disease, or an immunoglobulin E (IgE)-related consorder in an individual, where the IgE-related disorder is allergy, or an allergy-related disorder. CIC's are also useful for treating cancer an individual. This polynucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compound of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activity, useful for modulating an immune response and for treating cancer, has nucleic acid moieties and non-nucleic acid spacer moieties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 1; Page 110;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2003-210159/20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to a novel chimeric immunomodulatory compound (CIC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chimeric immunomodulatory compound having immunomodulatory ity, useful for modulating an immune response and for treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                224pp; English.

Fearon KL,

```
CC biodegradable MC, where the MC is less than 10 micrometre in size; and CC (3) a kit comprising (1). (1) has antiallergic, antiasthmatic, virucide, CC antibacterial and protozoacide activities, and can be used as a modulator CC of immune response. (1) is useful for modulating an immune response in an CC individual suffering from disorders associated with a Th2-type immune CC response, especially an allergy or asthma, or an infectious disease. (1) CC is also useful for increasing interferon-gamma (IFN-gamma) in an CC individual having idiopathic pulmonary fibrosis, or IFN-alpha in an CC individual having a viral infection. (1) is further useful for CC ameliorating a symptom of an infectious disease caused by a cellular CC pathogen such as mycobacterial disease, malaria, leishmaniasis, CC toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or a symptom of an immunoglobulin E (IgE)-related disorder, preferably an CC present sequence represents an immunomodulatory oligonucleotide from the CC present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 38

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immune response which is an allergy or allergy-induced asthma, and an infectious disease. CIC is also useful for increasing IFN-gamma; or IFN-alpha; in an individual, where the individual has idiopathic pulmonary fibrosis, or a viral infection. CIC's are useful for ameliorating a symptom of an infectious disease, or an immunoglobulin E (IgE) related disorder in an individual, where the IgE-related disorder is allergy, or an allergy-related disorder. CIC's are also useful for treating cancer and can be used for stimulating cellular immune system cells production in an individual. This polymucleotide sequence represents a DNA sequence which is a nucleic acid moiety part of a chimeric immunodulatory compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel chimeric immunomodulatory compound (CIC) having immunomodulatory activity, comprising two or more nucleic acid moietles and one or more non-nucleic acid spacer moietles, where at least one non-nucleic acid spacer moietly is covalently joined to two nucleic acid moietles, where the spacer is not a polypeptide, and at least one nucleic acid moietly comprises the sequence 5'-CG-3'. The chimeric immunodulatory compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEG) subunits. CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Th2-type

The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL06176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL01840-ABL16175) and the sequence in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Drosophila melanogaster
